DETAILED ACTION

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, prior art fails to show alone or in combination that prior to the step of locking the local clocks to the time values, calculating an offset value for the second timestamp using an average bit rate and subtracting the offset from the time value of the second timestamp. In the prior art of Woodhead et al, U.S. Patent No 5640388, it discloses that a method to calculate an average bit rate and an offset. However, such offset value is not determined according to the average bit rate. In the prior art of Slattery et al, U.S. Patent No 6111896, it discloses a method to calculate an offset. However, such offset value is determined according to the position of the queuing position of the packets in the queue.

Regarding Claims 4-9, the set of claim is allowable because it depends on the allowable independent claim.

Regarding claims 10-12, prior art fails to show alone or in combination that determining a time offset value for a given selected packet bases upon the position of the given packet within the

frame in which the given selected packet was received and stamping a new time value by subtracting the time offset from the time value for the external clock. In the prior art of Slattery et al, U.S. Patent No 6111896, it discloses a method to calculate an offset. However, such offset value is determined according to the position of the queuing position of the packets in the queue.

Regarding claims 13 and 22, prior art fails to show alone or in combination that prior to the step of locking the local clocks to the time values, an apparatus calculates a clumping error value for the second timestamp using an average bit rate and subtracting the clumping error from the time value of the second timestamp. In the prior art of Woodhead et al, U.S. Patent No 5640388, it discloses that a method to calculate an average bit rate and an offset. However, such offset value is not determined according to the average bit rate. In the prior art of Slattery et al, U.S. Patent No 6111896, it discloses a method to calculate an offset. However, such offset value is determined according to the position of the queuing position of the packets in the queue.

Regarding Claims 14-21 and 23-26, the sets of claim are allowable because they depend on the allowable independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
